

WebCLOCK Web-Based Employee Time & Attendance System

An extremely versatile web-based employee time and attendance system, Acumen's WebCLOCK features task tracking, project tracking, employee self-service, and benefit management in addition to the employee time tracking capabilities of the software.

WebCLOCK can be deployed along with traditional time clocks or used as the exclusive clocking method for your time and attendance system, with LaborVIEW as the administrative engine.

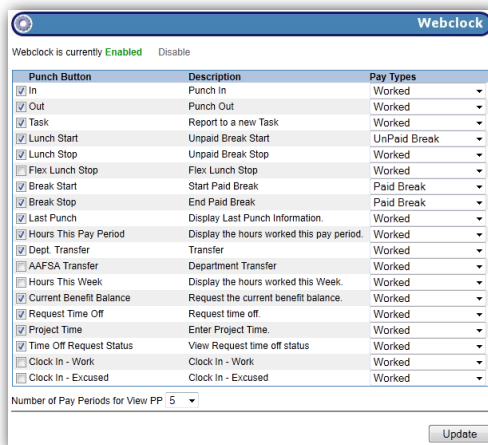

As a highly configurable system, WebCLOCK can be customized to display as many buttons and functions as you'd like, company-wide, departmentally, or for specific employees.

Information Week reports that employee time and attendance software pays for itself in as little as a few months thanks to reductions in clerical errors, reduction of processing time, elimination of paper time cards, and employee overpayment (for unauthorized breaks, etc.).
